**Subject: *Service Allison Transmission 6 Speed
(3000/4000)***

Bulletin Number: M001063

2003 Models

Beginning with the first **2003 model**, Foretravel uses **TranSynd Transmission fluid** as the initial factory fill. The use of the new gold series filters introduced by Allison Transmission will allow the transmission service intervals be extended to **75,000 miles or 36 months.**

The initial main filter change will be required at 5,000 miles. The next scheduled transmission service will be required at 75,000 miles or 36 months whichever occurs first. The initial main filter change will require approximately 2-3 quarts of fluid for the MH3000 and 4-5 quarts for the MH4000 series.

2002 Model and Older

For Foretravel Motorhomes earlier than **2003**, **the following customer options apply.** If a customer elects to use TranSynd Fluid to obtain the extended service interval, the following applies:

- (1) Make the initial change to TranSynd and the Gold Series filter.
- (2) Change the TranSynd and filters at 12,000 miles or 6 months.
- (3) After the **second change**, the intervals will be as listed for TranSynd users, or 75,000 miles or 36 months, whichever occurs first.

The initial main filter change will be required at 5,000 miles. The main filter can be identified having **“MAIN”** embossed on the filter cover. The main filter will be located on the opposite side of the transmission from the drain plug. **The amount of fluid collected from the removal of this filter should be measured and that amount should be reinstalled in the transmission.** This will complete the initial service procedure for the 2003 Model.

Part Numbers:

Main filter-29540496 (initial change with TranSynd only)

Full filter kit-29540494 (All changes other than initial with TranSynd)

TranSynd-27101CTCS (1Gallon Container)
